When extra lifting power is necessary

User-friendliness, a genuine regard for safety and a well-thought out design has made the Likorall overhead lift motor highly regarded among both care staff and patients.

Likorall 243 and Likorall 250 are two versions of Likorall that have extra lifting power and are natural choices when working with patients who are slightly heavier. The Likorall “heavyweight models” can lift 230 and 250 kg respectively (507/550 lbs.). The UltraTwin lift system is comprised of two lift motors connected together, thus doubling the lifting capacity up to 500 kg (1,100 lbs).

Likorall’s combination of unique technology, operational reliability and ease of maintenance, together with Liko’s wide range of accessories, make it possible to solve almost any lifting situation imaginable.
For the sake of safety
We always make safety and function a priority and we believe that Likorall is the safest overhead lift in the world. Likorall has a unique, patented safety drum, a lift strap with ten-fold safety margin and is equipped with SSP Safety Squeeze Protection. An emergency lifting and lowering device is also located on the lift motor cover. It is easy to access e.g. if the batteries in the hand control are not charged.

Other safety details:
• Electric emergency stop
• Slingbar with safety latches
• Fixings with four-fold safety factor

Accessories
• Wired hand control or optional wireless remote control.
• Transfer motor for movement along the rail.
• Multistation for charging or controlling switches in the rail system.
• An carriage adapter makes it possible to move the lift motor simply and easily between different rail systems, without the use of tools.
• Liko has the market’s widest range of slings and other lift accessories. Find out more at www.liko.com.
